PROFESSIONAL SUMMARY

Software engineer with **6+ years** of enterprise product experience at Infosys and EdgeVerve Systems (an Infosys subsidiary). Since 2024, I have also worked on AI applications and developer tools for documentation, incident diagnosis, and banking interfaces. My work spans frontend architecture, API integration, and practical ways to review model output against its source material.

PROFESSIONAL EXPERIENCE

Member – UI Development

Jan 2024 – Present

EdgeVerve Systems Limited (an Infosys subsidiary) · Bengaluru, India

- Built **DocViz AI** during an internal hackathon: four specialist agents followed by a QA step for document-to-video explanation; worked on the pipeline, structured storyboard handoff, and browser renderer
- Built the **5-Minute RCA Tool**, a zero-dependency Python agent that matches error signatures against curated playbooks and cross-references live GitHub code search across linked repositories, replacing a manual multi-repo debugging routine with a single-query workflow
- Authored an **autonomous documentation QA agent** using Playwright + LLM validation that crawls documentation portals, scores every checklist item, and produces confidence-scored HTML/JSON audit reports with evidence screenshots
- Designed **Quota Smart Copilot**, a custom VS Code agent that classifies requests and recommends a model tier based on task complexity and remaining Copilot budget
- Worked on a **GenAI search overlay** for an enterprise MkDocs portal and a context layer for conversational banking UI, summarising user journey state for AI queries
- Led UI development and code reviews for Finacle banking product teams; mentored junior developers on component architecture and API integration patterns

Product Engineer

2022 – Jan 2024

EdgeVerve Systems Limited · Bengaluru, India

- Developed feature modules for **Finacle Cash Management, Expense Management, and Payments** products
- Built reusable UI component libraries with Polymer.js and WaveMaker, reducing screen delivery time for new feature iterations across the product suite
- Implemented and maintained RESTful APIs using Spring Boot and LoopBack for payment processing and transaction tracking workflows
- Collaborated with QA, product, and design teams in agile sprints across three concurrent Finacle banking modules

Senior Systems Engineer

2021 – 2022

Infosys Limited · India

- Promoted from Systems Engineer for consistent delivery performance — took full ownership of complex feature modules including design, development, and stakeholder sign-off
- Provided technical guidance and code review support to junior team members; contributed to architecture decisions on the assigned client project

Systems Engineer

Dec 2019 – 2021

Infosys Limited · India

- Contributed to full-stack development on enterprise client delivery teams — built front-end modules in Angular and backend services in Java / Spring Boot
- Developed working proficiency across enterprise software delivery processes, agile practices, and production code quality standards

NOTABLE PROJECTS

DocViz AI

AI Hackathon 2026 · EdgeVerve

MULTI-AGENT RAG · VIDEO GENERATION

4-agent pipeline (retriever, analyst, creative director, storyboard engineer) with a QA validator that converts enterprise docs into narrated animated videos. Built the client-side animation engine and MP4 export from scratch.

Project HER

Personal project · Cloud Run

ARTICLE-TO-VIDEO APPLICATION

Built a staged workflow for script generation, narration, media selection, and video composition; deployed an external demo on Google Cloud Run.
